SUPERVISORY PATENT EXAMINER

## SEARCH REQUEST FORM

Requester: Pryor Examiner #: 74458 Date: 9/7/06  
Art Unit: 1616 Phone Number: 2-0621 Serial Number: 10/797,927  
Location (Bldg/Room#): 4REM39 (Mailbox #): 4REM70 Results Format Preferred (circle): PAPER DISK  
\*\*\*\*\*

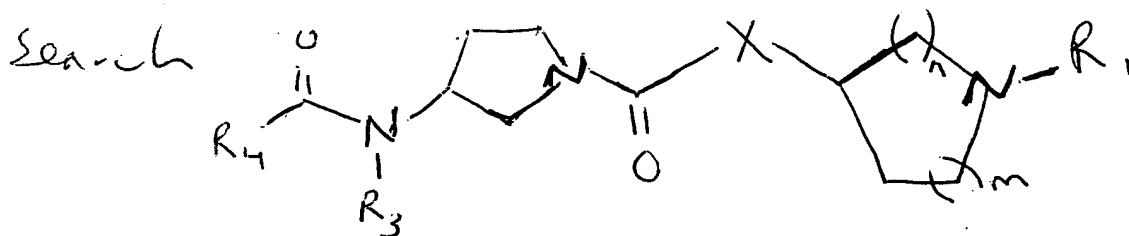

To ensure an efficient and quality search, please attach a copy of the cover sheet, claims, and abstract or fill out the following:

Title of Invention: Melanin-concentrating hormone receptor-antagonist  
Inventors (please provide full names): Val Goodfellow; Martin Rowbottom;  
Brian Dyck; Junko Tamiya; Mingzhu Zhang; Jonathan Gre;  
Troy Vickers  
Earliest Priority Date: \_\_\_\_\_

### Search Topic:

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations; authors, etc., if known.

\*For Sequence Searches Only\* Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.

$\text{R}_4 = \text{alkyl, aryl, heterocycle, NR}_7\text{R}_8$

$\text{R}_7 \text{ \& } \text{R}_8 = \text{H, Alkyl, Aryl, heterocycle (or)}$

taken together w/ "N" to form  
a heterocyclic ring

$m = 0 \text{ @ } 1$

$n = 1 \text{ @ } 2$

$\text{X} = -\text{CH}_2- \text{ or } -\text{N}(\text{R}_6)-$

$\text{R}_6 = \text{H, Alkyl}$

\* See claim 1 attached

OTHER SOURCE(S): CASREACT 143:229673

AB A novel series of bis-aminopyrrolidine ureas containing either a 4-biphenylcarboxamide or 5-phenyl-2-thiophenecarboxamide group have been identified as potent and functional antagonists of the melanin-concentrating hormone receptor-1. Syntheses and SAR are described, which led to the discovery of compds. with high binding affinity ( $K_i = 1$  nM) for the receptor. Preliminary in vitro metabolic stability data are also reported for key compds.

AB Ureas, e.g., I, derived from two substituted 3-aminopyrrolidine subunits were prepared as constrained analogs of a linear lead compound and tested as antagonists of the MCH1 receptor. The series was optimized for substitution and stereochem. to generate a functional antagonist with a  $K_i$  of 3.3 nM and  $IC_{50}$  of 12 nM (GTP $\gamma$ S).

- AB Title compds. I [m = 0 or 1; n = 1 or 2; X = -CH<sub>2</sub>-, or -N(R<sub>6</sub>)-; R<sub>1</sub> = H, (un)substituted-alkyl, -aryl, -arylalkyl, etc.; R<sub>2</sub> and R<sub>5</sub> independently = H, (un)substituted alkyl; R<sub>3</sub> = H, (un)substituted-alkyl, -arylalkyl, -heteroarylalkyl; R<sub>4</sub> = (un)substituted-alkyl, -aryl, -heterocycle; R<sub>6</sub> = H or (un)substituted alkyl] and their pharmaceutically acceptable salt, are disclosed as melanin-concentrating hormone (MCH) receptor antagonists having utility for the treatment of MCH receptor-based disorders such as obesity. Thus, e.g., II was prepared via amidation of of III (preparation given) with benzoyl chloride. Methods for evaluation of compds. are described (no data). Also disclosed are compns. containing a compound of this invention, as well as methods relating to the use thereof.

\* STRUCTURE DIAGRAM TOO LARGE FOR DISPLAY - AVAILABLE VIA OFFLINE PRINT \*

AB 2-Aminocarbonyl-9H-purine nucleosides I wherein R, R2 are independently H, alkyl; R1 is H, substituted alkyl, fluorenyl; R3 is H, alkyl, cycloalkyl, benzyl; R4 is substituted azetidin-3-yl, pyrrolidin-3-yl, piperidin-3-yl, piperidin-4-yl, homopiperidin-3-yl or homopiperidin-4-yl; R3R4 taken together with the nitrogen atom to which they are attached, represent azetidiny, pyrrolidinyl, piperidinyl, piperazinyl, homopiperidinyl or homopiperazinyl, each being optionally substituted on a ring nitrogen or carbon atom by alkyl or cycloalkyl; R5 is CH2OH, amide; X is substituted alkylene; RX or R2X with the nitrogen atom to which they are attached, represent azetidin-3-yl, pyrrolidin-3-yl, piperidin-3-yl, piperidin-4-yl, homopiperidin-3-yl or homopiperidin-4-yl; Y is CO, CS, SO2, C=N(CN); were prepared as A2a receptor agonists and anti-inflammatory agents. Thus, nucleoside II was prepared and tested as A2a receptor agonist and anti-inflammatory agent. Title compds. were tested for biol. activity as A2a receptor agonists and anti-inflammatory agents and all were found to have an IC50 of less than 100 nM.

AB Carbamate linked prolyl nucleic acids are obtained in high yield and purity under mild conditions in solution and solid phase.  
P-Nitrophenylchloroformate is used as the activating reagent for alc. Homooligomers of PrCNA do not bind to DNA. The introduction of this modification in PNA sequences destabilizes the triplexes, inspite of enhancement in the base stacking.

AB This paper describes an approach to introducing conformational constraint and chirality into the peptide nucleic acid (PNA) backbone by bridging the ethylenediamine and glycine components of the same unit by a methylene group which leads to PNA based on 4-aminoprolyl backbone with chirality at C-4 and C-2. The synthesis and characterization of all four diastereoisomers of I (R = H, Cbz, Fmoc; R1 = H, Me; B = thymine or T) and the synthesis of four compds. of I (R = Boc; R1 = H, CH2Ph; B = thymine,

cytosine, adenine and guanine) with (2S, 4R) stereochem. are described. Using these monomeric units, two model dimers II (R = H, Cbz; B = T) and III (R = H, Fmoc; B = T) containing four chiral centers but differing in stereochem. at only one site were prepared, and CD data on these indicate considerable structural differences in base stacking induced by chiral backbone among these.

LANGUAGE: English

AB This paper describes chemical synthesis of prolyl peptide nucleic acids (PNAs) which are a class of conformationally constrained chiral PNA analogs. The monomers are derived from bridging the ethylenediamine and glycine components of the same unit which leads to PNA based on 4-aminoproline backbone with chirality at C-4 and C-2. The modified monomers corresponding to D-trans and L-trans prolyl-thymidine have been incorporated into standard PNA chains, both at the N-terminus and in the interior to generate chiral PNAs. The complementation studies with DNA employing temperature dependent UV spectroscopy indicated that the chiral modifications in PNA:DNA duplexes imparted both stability and orientational preferences. CD spectral studies of chiral PNA:DNA duplexes suggest that the D-trans antiparallel duplexes have the B-DNA conformation while L-trans PNA:DNA duplexes show departure from B-DNA geometry. Thus, inclusion of even a single backbone constrained, distended chiral monomeric unit such as 4-aminoproline into an achiral PNA chain, either at the N-terminus or in the interior, leads to stabilization of the PNA:DNA hybrid. The linking of a polycation such as spermine at the C-terminus of chiral PNA further enhances the thermal stability of duplexes.

AB New PNA monomers, e.g. I (Boc = Me<sub>3</sub>CO<sub>2</sub>C, B = thymine-1-yl, N<sup>4</sup>-benzyloxycarbonyl-cytosine-1-yl) and both diastereoisomers of II containing aminoprolines or pyrrolidines as backbones have been synthesized. Oligomerization was carried out on a solid support. The oligomers of the new PNA monomers were completely resistance to enzymic degradation. Unfortunately, no hybridization was found for the oligomers with their complementary DNA.

AB The title compds. [I; R1 = C1-6 alkyl, C2-6 alkenyl; R2 = (un)substituted C1-6 alkyl, C3-6 alkenyl or alkynyl, C3-6 cycloalkyl, etc.; R3 = H, protecting group; R4 = (protected) CO2H, tetrazolyl, SO2NHCOR5 (wherein R5 = C1-16 alkyl, C6-14 aryl; Y = O, bond), (un)substituted Ph; X = bond, O; Z1, Z2 = CO, SO2], useful as cardiovascular agents in treating hypertension, etc., at 0.5-30 mg/day in adults, are prepared. Acylation of trityl compound (2S,4S)-II (R = trityl, R3 = Me, R5 = H) with (BuCO)2O in pyridine gave valeryl compound (2S,4S)-II (R = trityl, R3 = Me, R5 = BuCO), which was treated with HOAc to give (2S,4S)-II (R = H, R3 = Me, R5 = BuCO) (III). Saponification of III gave the free acid II (R = R3 = H, R5 = BuCO).

IC50

of I against angiotensin II in rats were determined

 CODEN: BMCLE8; ISSN: 0960-894X  
 PUBLISHER: Elsevier B.V.  
 DOCUMENT TYPE: Journal  
 LANGUAGE: English  
 AB The design, synthesis, and SAR of a series of retro bis-aminopyrrolidine ureas are described. Compds. from this series exhibited considerable binding affinity ( $K_i = 1$  nM) and functional activity at MCH-R1, acceptable CYP2D6 inhibition, and good rat brain exposure.

L29 ANSWER 2 OF 14 HCAPLUS COPYRIGHT 2006 ACS on STN

AB Melanin-concentrating hormone receptor antagonists containing thieno- and a benzopyridazinone cores were designed and tested as potential anorectic agents. These ligands showed high affinity for the receptor, potent functional activity in vitro, and good oral bioavailability in rats. The thiophene analog exhibited low iv clearance, long half-life, and high brain penetration. In obese rats, the thienopyridazinone demonstrated a dose-dependent reduction in feeding and body weight with doses between 1 and 10 mg kg<sup>-1</sup>.

AB Title compds. I [R1 = H, (un)substituted alkyl, aryl, etc.; R2 = H, C(O)R4, (un)substituted alkyl, etc. or R1 and R2 together may form (un)substituted heterocycle; R3 = H, CN, halo, etc.; R4 = OH, (un)substituted -O-alkyl, arylalkyl, etc.; Het = mono- or bicyclic (un)substituted heterocycle containing 1-3 heteroatoms selected from O, S or N and containing a keto functionality that is adjacent to the carbon which the pyridyl ring is attached to; X = a bond or O; Cyc = (un)substituted cycloalkyl, aryl or heterocycle] and their pharmaceutically acceptable salts, are prepared and disclosed as antagonists of MCH receptor. Thus, e.g., II was prepared by reduction of 4-bromophthalimide followed by treatment with hydrazine to give the resp. bromophthalazinone, which underwent a palladium catalyzed Suzuki coupling with 4-(trifluoromethyl)phenylboronic acid and subsequent coupling with III (preparation given). Assay methods for evaluation of binding ability of I to MCH receptors are described (no data). I as MCH receptor antagonist should prove useful in the treatment of obesity, depression and fertility dysfunction. Pharmaceutical compns. comprising I are disclosed.

AB The melanocortin-4 receptor (MC4R) plays an important role in the regulation of energy homeostasis. Recent studies have shown that blockade of the MC4R reverses tumor-induced weight loss in mice. Herein, the synthesis and identification of potent and selective non-peptide antagonists of the human MC4R from a series of 2-[(ethoxycarbonyl)cyclohexyl]piperazine derivs. are described. One compds. was found to possess low nanomolar affinity for the MC4R, and exhibit oral bioavailability in rats. More importantly, when administered orally to mice (10 mg/kg), it led to statistically significant increases in food intake over a 24-h period.

AB The synthesis and SAR studies of tricyclic imidazo[4,5-b]pyridin-2-ones as human corticotropin-releasing factor receptor (CRF1) antagonists were discussed. One compound was identified as a functional antagonist that inhibited CRF-stimulated cyclic adenosine monophosphate production and CRF-induced adrenocorticotrophic hormone release. Pharmacokinetics studies in rats showed that this compound was orally bioavailable, had good brain penetration, and had a moderate half-life. In an effort to identify CRF1 antagonists with improved pharmacokinetics properties, this compound also exhibited a favorably lower volume of distribution. Because of the key role CRF plays a role in stress response, centrally acting CRF1 antagonists are expected to be useful in the treatment of stress-related psychiatric disorders, such as anxiety and depression.

I

II

AB Title pyrrolidinamines I [wherein  $n = 0, 1$ ;  $R_1 = H$ , (un)substituted (aryl)alkyl, heterocyclyl(alkyl);  $R_2 = H$ , (un)substituted alkyl, COR7, SO2R8; or  $NR_1R_2 =$  (un)substituted heterocyclyl;  $R_3, R_5, R_6, R_8 =$  independently  $H$ , (un)substituted alkyl;  $R_4 =$  (un)substituted alkyl, (hetero)aryl, heterocyclyl;  $R_7 =$  independently  $H, OH$ , alkoxy, (un)substituted alkyl, aryl, heterocyclyl;  $R_9 = OH$ , alkoxy, (un)substituted alkyl, aryl; and stereoisomers, prodrugs, or pharmaceutically acceptable salts thereof] were prepared as melanin-concentrating hormone (MCH) receptor antagonists. For example, a 6-step synthesis starting from (R)-3-amino-1-benzylpyrrolidine, 4-nitrophenyl (S)-3-[(tert-butoxycarbonyl)(methyl)amino]pyrrolidine-1-carboxylate, 4-trifluoromethyl-5-phenylthiophene-2-carboxylic acid, and cycloheptanone gave II. Over half of the exemplified invention compds., including II, exhibited the ability to bind to the human [125I]-MCH receptor with  $K_i$  values  $<1 \mu M$ . Thus, I and their pharmaceutical compns. are useful for the treatment of MCH receptor-based disorders, such as obesity, anxiety, depression, digestive disorders, fertility, sexual function disorders, and urinary disorders (no data).

AB Diarylimidazolecarboxamides and diaryltriazolecarboxamides related to SR141716 were synthesized and tested for binding to the human CB1 receptor. Suitably substituted imidazoles are comparably potent to the clin. candidate, whereas the analogous triazoles are less so due to the absence of an addnl. substituent on the azole ring. Example compds. thus prepared and evaluated were derivs. of 5-(4-chlorophenyl)-1-(2,4-dichlorophenyl)-4-methyl-N-1-piperidinyl-1H-pyrazole-3-carboxamide (SR 141716) (I), such as 5-(4-chlorophenyl)-1-(2,4-dichlorophenyl)-N-(hexahydro-1H-azepin-1-yl)-1H-1,2,4-triazole-3-carboxamide (II) and 1-(4-chlorophenyl)-2-(2,4-dichlorophenyl)-N-(hexahydrocyclopenta[c]pyrrol-2(1H)-yl)-5-methyl-1H-imidazole-4-carboxamide (III).

AB The invention relates to peptides I [ $m = 1-4$ ;  $n = 0-4$ ; A is (un)substituted alkanediyl;  $R_1, R_2, R_{3a}, R_{3b} = H$ , (un)substituted alkyl, aryl, arylalkyl, heterocyclyl, or heterocyclylalkyl or may combine to form rings;  $R_1$  or  $R_2$  may also be acyl;  $R_4 =$  (un)substituted (hetero)aryl;  $R_5 = H, OH$ , (un)substituted alkyl, aryl, or heterocyclyl;  $R_6 =$  cyano, nitro, (un)substituted heterocyclyl, amino, carbamoyl, etc.;  $R_7 = H$  or 1-4 substituents], or stereoisomers, prodrugs or pharmaceutically-acceptable salts, which function as melanocortin receptor ligands and may be used to treat disorders or illnesses including cachexia, obesity, diabetes, inflammation, and sexual dysfunction. Thus, treatment of cyclohexanone with sodium metabisulfite in  $H_2O$ , followed by addition of Boc-protected piperazine and then NaCN, afforded 1-Boc-4-(1-cyanocyclohexyl)piperazine. The latter was converted into peptide II via coupling reaction.

AB Melanin-concentrating hormone receptor antagonists containing thieno- and a benzopyridazinone cores were designed and tested as potential anorectic agents. These ligands showed high affinity for the receptor, potent functional activity in vitro, and good oral bioavailability in rats. The thiophene analog exhibited low iv clearance, long half-life, and high brain penetration. In obese rats, the thienopyridazinone demonstrated a dose-dependent reduction in feeding and body weight with doses between 1 and 10

mg kg-1.

AB Title compds. I [R1 = H, (un)substituted alkyl, aryl, etc.; R2 = H, C(O)R4, (un)substituted alkyl, etc. or R1 and R2 together may form (un)substituted heterocycle; R3 = H, CN, halo, etc.; R4 = OH, (un)substituted -O-alkyl, arylalkyl, etc.; Het = mono- or bicyclic (un)substituted heterocycle containing 1-3 heteroatoms selected from O, S or N and containing a keto functionality that is adjacent to the carbon which the pyridyl ring is attached to; X = a bond or O; Cyc = (un)substituted cycloalkyl, aryl or heterocycle] and their pharmaceutically acceptable salts, are prepared and disclosed as antagonists of MCH receptor. Thus, e.g., II was prepared by reduction of 4-bromophthalimide followed by treatment with hydrazine to give the resp. bromophthalazinone, which underwent a palladium catalyzed Suzuki coupling with 4-(trifluoromethyl)phenylboronic acid and subsequent coupling with III (preparation given). Assay methods for

evaluation of binding ability of I to MCH receptors are described (no data). I as MCH receptor antagonist should prove useful in the treatment of obesity, depression and fertility dysfunction. Pharmaceutical compns. comprising I are disclosed.

AB Title pyrrolidinamines I [wherein  $n = 0, 1$ ;  $R_1 = H$ , (un)substituted (aryl)alkyl, heterocycl(alkyl);  $R_2 = H$ , (un)substituted alkyl, COR7, SO2R8; or  $NR_1R_2 =$  (un)substituted heterocycl(alkyl);  $R_3, R_5, R_6, R_8 =$  independently  $H$ , (un)substituted alkyl;  $R_4 =$  (un)substituted alkyl, (hetero)aryl, heterocycl(alkyl);  $R_7 =$  independently  $H, OH$ , alkoxy, (un)substituted alkyl, aryl, heterocycl(alkyl);  $R_9 = OH$ , alkoxy, (un)substituted alkyl, aryl; and stereoisomers, prodrugs, or pharmaceutically acceptable salts thereof] were prepared as melanin-concentrating hormone (MCH) receptor antagonists. For example, a 6-step synthesis starting from (R)-3-amino-1-benzylpyrrolidine, 4-nitrophenyl (S)-3-[(tert-butoxycarbonyl)(methyl)amino]pyrrolidine-1-carboxylate, 4-trifluoromethyl-5-phenylthiophene-2-carboxylic acid, and cycloheptanone gave II. Over half of the exemplified invention compds., including II, exhibited the ability to bind to the human [125I]-MCH receptor with  $K_i$  values  $<1 \mu M$ . Thus, I and their pharmaceutical compns. are useful for the treatment of MCH receptor-based disorders, such as obesity, anxiety, depression, digestive disorders, fertility, sexual function disorders, and urinary disorders (no data).
